

In the claims:

Please substitute the following full listing of claims for the claims as originally filed or most recently amended.

1. (Currently Amended) An electronic information transmission method wherein designating a prescribed area on an information page that is supplied from a communication means that is connected to a plurality of terminals causes an information transmission page for creating and/or transmitting desired information to be displayed on a said terminal, and said desired information is transmitted to a desired transmission destination using said information transmission page; said electronic information transmission method comprising steps of:

displaying information on said information page that allows said transmission destination to be identified, confirmed, or selected;

designating said transmission destination by designating said information;

displaying on said terminal an information transmission page in which the destination is set to said transmission destination responsive to said designating step; and

transmitting said desired information to said transmission destination using said information transmission page.

5 2. (Withdrawn) An electronic information transmission method wherein designating a prescribed area on an information page that is supplied from a communication means that is connected to a plurality of terminals causes an information transmission page for creating and/or transmitting desired information to be displayed on a said terminal, and said desired

information is transmitted to a desired transmission destination using said information transmission page;
10 said electronic information transmission method comprising steps of:

designating a transmission destination of said desired information by designating information that is displayed on said information page that allows the
15 transmission destination to be identified, confirmed, or selected;

displaying on said terminal an information transmission page in which the destination is set to said transmission destination; and

20 transmitting said desired information to said transmission destination using said information transmission page.

3. (Withdrawn) An electronic information transmission method wherein an information transmission page for creating and/or transmitting desired information is displayed on a plurality of terminals
5 that are interconnected by way of a communication means and said desired information is transmitted to a desired transmission destination using said information transmission page; said electronic information transmission method including a step of displaying on
10 said terminals information that allows said transmission destination to be identified, confirmed, or selected before displaying said information transmission page.

4. (Withdrawn) An electronic information transmission method wherein designating a prescribed area on an information page that is supplied from a communication means that is connected to a plurality of terminal causes an information transmission page for creating and/or transmitting desired information to be displayed on said terminals, and said desired information is transmitted to a desired transmission destination using said information transmission page; said electronic information transmission method comprising steps of:

displaying electronic information on said information page that relates to said transmission destination;

displaying information that allows said transmission destination to be identified, checked or selected by designating the electronic information;

designating said transmission destination by designating the information;

displaying on said terminal an information transmission page in which the destination is set to said transmission destination; and

transmitting said desired information to said transmission destination using said information transmission page.

5. (Withdrawn) An electronic information transmission method wherein designating a prescribed area on an information page that is supplied from a communication means that is connected to a plurality of terminals causes an information transmission page for creating and/or transmitting desired information to be

displayed on said terminals, and said desired information is transmitted to a desired transmission destination using said information transmission page; said electronic information transmission method comprising steps of:

displaying, on said information page: information that allows said transmission destination to be identified, checked, or selected; and a specific icon adjacent to the information;

designating said transmission destination by designating the icon;

displaying an information transmission page in which the destination is set to said transmission destination; and

transmitting said desired information to said transmission destination using said information transmission page.

6. (Withdrawn) An electronic information transmission method wherein designating a prescribed area on an information page that is supplied from a communication means that is connected to a plurality of terminals causes an information transmission page for creating and/or transmitting desired information to be displayed on said terminal, and said desired information is transmitted to a desired transmission destination using said information transmission page; said electronic information transmission method comprising steps of:

specifying the transmission destination of said desired information by designating an icon that is displayed adjacent to information that is displayed on said information page that allows the transmission

destination to be identified, checked or selected;
displaying on said terminals an information
transmission page in which the destination is set to
said transmission destination; and
20 transmitting said desired information to said
transmission destination using said information
transmission page.

7. (Currently Amended) An electronic information
transmission method according to claim 1 wherein said
information that allows said transmission destination
to be identified, checked, or selected is a picture of
5 the person or a mark that can specify, ~~for example,~~ a
business organization that is the transmission
destination.

8. (Withdrawn) An electronic information
transmission method according to claim 4 wherein said
information that allows said transmission destination
to be identified, checked, or selected is a picture of
5 the person or a mark that can specify, for example, a
business organization that is the transmission
destination.

9. (Withdrawn) An electronic information
transmission method according to claim 5 wherein said
information that allows said transmission destination
to be identified, checked, or selected is a picture of
5 the person or a mark that can specify, for example, a
business organization that is the transmission
destination.

10. (Currently Amended) An electronic information transmission method according to claim 1 wherein said information that allows said transmission destination to be identified, checked, or selected is the name and picture of the person or a mark that can specify, ~~for example,~~ a business organization that is the transmission destination, and wherein the destination of said desired information is specified by designating said picture, name, or mark.

11. (Withdrawn) An electronic information transmission method according to claim 4 wherein said information that allows said transmission destination to be identified, checked, or selected is the name and picture of the person or a mark that can specify, for example, a business organization that is the transmission destination, and wherein the destination of said desired information is specified by designating said picture, name, or mark.

12. (Withdrawn) An electronic information transmission method according to claim 5 wherein said information that allows said transmission destination to be identified, checked, or selected is the name and picture of the person or a mark that can specify, for example, a business organization that is the transmission destination, and wherein the destination of said desired information is specified by designating said picture, name, or mark.

13. (Currently Amended) An electronic information transmission method according to claim 7 wherein said information transmission page is displayed so as not to conceal the picture of the person or the mark that can specify, ~~for example,~~ the business organization that is said transmission destination.

14. (Withdrawn) An electronic information transmission method according to claim 8 wherein said information transmission page is displayed so as not to conceal the picture of the person or the mark that can specify, for example, the business organization that is said transmission destination.

15. (Withdrawn) An electronic information transmission method according to claim 9 wherein said information transmission page is displayed so as not to conceal the picture of the person or the mark that can specify, for example, the business organization that is said transmission destination.

16. (Currently Amended) An electronic information transmission method according to claim 10 wherein said information transmission page is displayed so as not to conceal the picture of the person or the mark that can specify, ~~for example,~~ the business organization that is said transmission destination.

17. (Withdrawn) An electronic information transmission method according to claim 11 wherein said information transmission page is displayed so as not to conceal the picture of the person or the mark that can specify, for example, the business organization that is said transmission destination.

18. (Withdrawn) An electronic information transmission method according to claim 12 wherein said information transmission page is displayed so as not to conceal the picture of the person or the mark that can specify, for example, the business organization that is said transmission destination.

19. (Original) An electronic information transmission method according to claim 1 wherein said transmission destination is specified by designating any position on the page on which is displayed said information that allows said transmission destination to be identified, checked, or selected.

20. (Original) An electronic information transmission method according to claim 1 wherein information that allows identification of the sender is appended to said desired information.

21. (Withdrawn) An electronic information transmission method according to claim 4 wherein information that allows identification of the sender is appended to said desired information.

22. (Withdrawn) An electronic information transmission method according to claim 5 wherein information that allows identification of the sender is appended to said desired information.

23. (Original) An electronic information transmission method according to claim 20 wherein said information that allows identification of the sender is a picture of the person that is the sender.

24. (Withdrawn) An electronic information transmission method according to claim 21 wherein said information that allows identification of the sender is a picture of the person that is the sender.

25. (Withdrawn) An electronic information transmission method according to claim 22 wherein said information that allows identification of the sender is
5 a picture of the person that is the sender.

26. (Withdrawn) An electronic information transmission method wherein designating prescribed information among an assemblage of information that is supplied from a communication means that is connected
5 to a plurality of terminals causes said terminals to switch to an information transmission mode for entering and/or transmitting desired information, and wherein said desired information is transmitted to a desired transmission destination using said information
10 transmission mode; said electronic information transmission method comprising steps of
transmitting to said terminal information that

allows said transmission destination to be identified,
checked, or selected;

15 designating the information; and
 switching to an information transmission mode in
which the destination is set to said transmission
destination.

27. (Withdrawn) An electronic information
transmission system comprising:

a plurality of terminals; and

5 a communication means that is constructed to
allow connection to said plurality of terminals and
that supplies information pages to said plurality of
terminals, stores information that is transmitted from
said plurality of terminals, and furthermore, causes an
information transmission page for creating and/or
10 transmitting desired information to be displayed on
said terminals when prescribed areas on said
information pages are designated by said terminals;

wherein:

15 said communication means, according to
designation made on said information page, displays
information that allows a transmission destination to
be identified, checked, or selected in order to an
display information transmission page in which said
desired transmission destination is made the
20 destination; and

 said terminals transmit said desired information
to a desired transmission destination using said
information transmission page.

28. (Withdrawn) An electronic information transmission system comprising:

a plurality of terminals; and

5 a communication means that is constructed to allow connection to said plurality of terminals and that supplies information pages to said plurality of terminals, stores information that is transmitted from said plurality of terminals, and furthermore, causes an information transmission page for creating and/or
10 transmitting desired information to be displayed on said terminals when prescribed areas on said information pages are designated by said terminals;

wherein:

said communication means specifies the
15 destination of said desired information by means of the designation by said terminals of information that allows transmission destinations that are displayed on said information pages to be identified, checked, or selected; and

20 said terminals transmit said desired information to a desired transmission destination using said information transmission page.

29. (Withdrawn) An electronic information transmission system comprising:

a plurality of terminals; and

5 a communication means that is constructed to allow connection to said plurality of terminals and that supplies information pages to said plurality of terminals, stores information that is transmitted from said plurality of terminals, and furthermore, causes an information transmission page for creating and/or

10 transmitting desired information to be displayed on
said terminals when prescribed areas on said
information pages are designated by said terminals;

wherein:

15 said communication means displays on said
information page both information that allows said
transmission destination to be identified, checked, or
selected and, in an area adjacent to this information,
an icon that, when designated, causes an information
transmission page in which said transmission
20 destination is made the destination to be displayed;
and

said terminals transmit said desired information
to a desired transmission destination using said
information transmission page.

30. (Withdrawn) An electronic information
transmission system comprising:

a plurality of terminals; and

5 a communication means that is constructed to
allow connection to said plurality of terminals and
that supplies information pages to said plurality of
terminals, stores information that is transmitted from
said plurality of terminals, and furthermore, causes an
information transmission page for creating and/or
10 transmitting desired information to be displayed on
said terminals when prescribed areas on said
information pages are designated by said terminals;

wherein:

15 said communication means specifies the
destination of said desired information by means of the
designation by said terminals of icons that are
displayed adjacent to information that allows

transmission destinations that are displayed on said
information pages to be identified, checked, or
20 selected; and

said terminals transmit said desired information
to a desired transmission destination using said
information transmission page.

31. (Withdrawn) An electronic information
transmission system according to claim 27 wherein said
information that allows said transmission destination
to be identified, checked, or selected is a picture of
5 the person or a mark that can specify, for example, a
business organization that is the transmission
destination.

32. (Withdrawn) An electronic information
transmission system according to claim 29 wherein said
information that allows said transmission destination
to be identified, checked, or selected is a picture of
5 the person or a mark that can specify, for example, a
business organization that is the transmission
destination.

33. (Withdrawn) An electronic information
transmission system according to claim 27 wherein said
information that allows said transmission destination
to be identified, checked, or selected is the name and
5 picture of the person or a mark that can specify, for
example, a business organization that is the
transmission destination, and designating the picture
or name or mark causes the destination of said desired
information to be specified.

34. (Withdrawn) An electronic information transmission system according to claim 29 wherein said information that allows said transmission destination to be identified, checked, or selected is the name and
5 picture of the person or a mark that can specify, for example, a business organization that is the transmission destination, and designating the picture or name or mark causes the destination of said desired information to be specified.

35. (Withdrawn) An electronic information transmission system according to claim 31 wherein said information transmission page is displayed so as not to conceal the picture of the person or the mark that can
5 specify, for example, a business organization that is said transmission destination.

36. (Withdrawn) An electronic information transmission system according to claim 32 wherein said information transmission page is displayed so as not to conceal the picture of the person or the mark that can
5 specify, for example, a business organization that is said transmission destination.

37. (Withdrawn) An electronic information transmission system according to claim 33 wherein said information transmission page is displayed so as not to conceal the picture of the person or the mark that can
5 specify, for example, a business organization that is said transmission destination.

38. (Withdrawn) An electronic information
transmission system according to claim 34 wherein said
5 information transmission page is displayed so as not to
conceal the picture of the person or the mark that can
specify, for example, a business organization that is
said transmission destination.

39. (Withdrawn) An electronic information
transmission system according to claim 27 wherein said
transmission destination is specified by designating
any position of the page on which is displayed said
5 information that allows said transmission destination
to be identified, checked, or selected.

40. (Withdrawn) An electronic information
transmission system according to claim 27 wherein said
plurality of terminals append information that allows
identification of the sender to said desired
5 information.

41. (Withdrawn) An electronic information
transmission system according to claim 29 wherein said
plurality of terminals append information that allows
identification of the sender to said desired
5 information.

42. (Withdrawn) An electronic information
transmission system according to claim 40 wherein said
information that allows identification of the sender is
a picture of the person that is the sender.

43. (Withdrawn) An electronic information transmission system according to claim 41 wherein said information that allows identification of the sender is a picture of the person that is the sender.

44. (Withdrawn) An electronic information transmission system comprising:

a plurality of terminals; and

5 a communication means that is constructed to allow connection to said plurality of terminals and that supplies an assemblage of information to said plurality of terminals, stores information that is transmitted from said plurality of terminals, and
10 furthermore, switches said terminals to an information transmission mode for creating and/or transmitting desired information when prescribed information is designated from among said assemblage of information by said terminals;

15 wherein:

said communication means includes, in said assemblage of information, information that allows said transmission destination to be identified, checked or selected, the designation of which causes switching to
20 an information transmission mode in which the destination is set to a desired transmission destination; and

said terminals transmit said desired information to a desired transmission destination using said
25 information transmission mode.

45. (Original) A server that is constructed to allow connection to a plurality of terminals and that stores information that is transmitted from said plurality of terminals; and that further:

5 displays on said terminals information that allows a desired transmission destination to be identified, checked, or selected, and

10 when said information is designated, displays on said terminals an information transmission page for creating and/or transmitting desired information in which said transmission destination is made the destination.

46. (Withdrawn) A server that is constructed to allow connection to a plurality of terminals and that stores information that is transmitted from said plurality of terminals; and that further:

5 displays on said terminals electronic information that relates to transmission destinations of said information; and

 when the electronic information is designated, displays on said terminals screen information that allows said transmission destination to be identified, checked, or selected.
